How can I transfer my data from Android to my Mac?

Christine - 2019-02-04 - in Backups

Please follow these steps to transfer your data via local backups from Android to your iPhone/iPad:

1. Send the backup from your Android device to your Mac, f.e. via Email: Settings > Backups > select backup of your choice > share
2. Share backup via email
3. Install Outbank on your Mac
4. Open the email on your Mac, click on the backup in the attachment and choose Outbank to open it
5. Enter the Master Password which was used to create the backup on your Android device.

Important: Log in again with your Outbank ID after restoring a backup.
