How can I transfer data from my iPhone/iPad to Android?

Christine - 2018-04-05 - in [Backups](#)

Please follow these steps to transfer your data via local backups from an iPhone/iPad to your Android device:

- Open the app on your iPhone/iPad and open backups via the settings
- Click on the backup of your choice > Share > choose a preferred option (f.e. email) > send backup to your own email address
- Install Outbank on your Android device
- Open the backup on your Android device (f.e. in the email) and select 'Copy to Outbank' > 'Restore': 'YES'
- Enter the master password which you used to create the backup. I may vary from your current one.

Important: Log in again with your Outbank ID after restoring your backup.
