How can I filter my transactions on my iPhone / iPad?

Christine - 2018-01-29 - in Search & Filter

You can filter your transactions on your iOS device according to certain criteria and show them in Outbank.

Select the bank from the account list and press the filter button right above the transaction list. Click on the button and the filter window opens.

You can now filter your transactions according to the following criteria:

- Type of the transaction: Credits/ Debits/ Both
- categories: Bookings with tag (#) or without a tag (#)
- Period: whole/ current month/ last month/ current year/ last year/ You can set the period manual, too
- Amout: Define the amount by slider

Click on 'Apply' to activate the filter.

If one or more filters are active, you can see this by the colored marking of the filter button.

To delete the filter, just turn back to the filters and 'Reset' > 'Apply'
