How can I tag my transactions?

Christine - 2019-01-16 - in Automatic categories / manual tags

You can easily tag transactions on your Android device with individual tags (#).

To do this, first select the account in the account list.

Now you tag the desired transaction directly in the list of transactions with a right swipe.

Select either a tag you've already created from tags or create an individual tag by typing "yourtag" and then press 'Done'.

You will see the assigned tag in the transaction's list.
