How can I use Outbank on multiple devices?

Christine - 2019-03-07 - in Secure Sync

With our Secure Sync, all your financial data is synchronized in real time on your iPhone, iPad and MacBook. Encryption methods based on the Zero Knowledge principle ensure 100% synchronization security. Access by third parties is thus excluded.

How to use Outbank on several devices:

1. Make sure, that the "Secure Sync" is activated under "Settings" on your device, where you already use the new Outbank and that you are signed in with your Outbank ID. To create an Outbank ID: 'Settings'>'Outbank ID'>'New Outbank ID'>Then switch on the Secure Sync
2. Open the app on the second device and select 'Outbank ID'> 'Do You already have an Outbank ID? Type in here'.
If you open the app for the first time on the second device, you can choose to use the 'Secure Sync' right from the start.
3. Enter the e-mail address you used to create your Outbank ID.
4. You will receive a verification code by e-mail. Enter it in the next step.
5. Then enter the master password assigned on the first device to connect the devices to each other.

Finished!
