How can I use Outbank on 1Password?

Christine - 2019-02-20 - in Master password

To use Outbank with 1Password, you have to install the 1Password app on your iOS device and connect Outbank with 1Password at the first login.

Proceed as follows:

1. Open Outbank > under the line for the master password you see the symbol for 1Password (next to the touch ID)
2. Select 'More' in the second line and then 1Password> 1Password is opened
3. Select 'New login' and create a login for Outbank. Then save the entitlements in the upper right corner.
4. On the next login, you can now use 1Password for the Outbank login
